10 years Live stream video, Video Replay and Web-TV on Shorttrackonline

It is the 10th season that the volunteer-team of Shorttrackonline.info is doing besides Photo Finish, Live stream video, Video Replay for referees and Video on demand for many international competitions. During these years we have been at more than 120 competitions all over Europe. We started with simple and cheap equipment but step by step we now use professional equipment with full HD quality and special own made software for operating the Video Replay for the referees.

The upcoming season we will be present again at many international competitions to do the Photo Finish, Live stream video and Video Replay for the referees. During the competitions the Live stream video can be seen on the Page WEB-TV of the website Shorttrackonline.info.

But the video is not used ONLY for the Live-stream and Video Replay! After the competition the images are processed into separate races and all the finals are uploaded to our server. Every race gets an ID number into the database and the races are with this ID connected to the Results Pages and the Personal Skaters Page on Shorttrackonline.info. In this way we create not only a historical library of video but also study material for the skaters which with one "click" on the tv-logo can see their Personal Results and Personal Video of every final of the past 10 years.

At the moment the images of more than 5000 finals of the past 10 years are stored on our servers. During the summer months the videos have been watched at between 300 and 500 times every week. During the winter period this number is reached almost every day. The total number of times a certain race is watched at differs a lot: one race from the first year of recording has been watched at more than 4000 times!

During the upcoming season we will be at many competitions again. For questions and information about Photo Finish, Live stream video and Video Replay you can contact: jpbmob@live.com.
